

## Ultra-Low Noise Microphone with Differential Output

### GENERAL DESCRIPTION

The ICS-40730 is an ultra-low noise, differential analog output, bottom-ported MEMS microphone. The ICS-40730 includes a MEMS microphone element, an impedance converter, a differential output amplifier and an enhanced RF package. The ICS-40730's 74 dB SNR and  $\pm 2$  dB sensitivity tolerance make it an excellent choice for microphone arrays and far field voice control applications.

The ICS-40730 has a linear response up to 123 dB SPL with a differential output sensitivity specification of  $-32$  dBV. It can be used in a single-ended mode with  $-38$  dBV sensitivity and the same high SNR.

The ICS-40730 is available in a  $4.72 \text{ mm} \times 3.76 \text{ mm} \times 3.50 \text{ mm}$  surface-mount package.

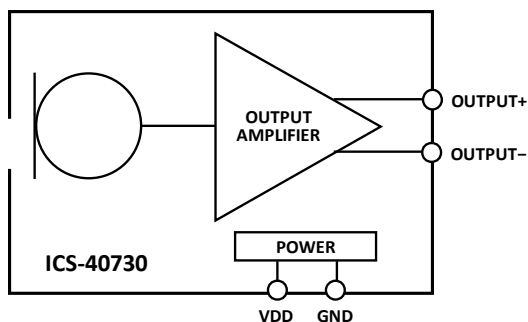

### APPLICATIONS

- Smart Home Devices
- Smartphones
- Teleconferencing Systems
- Security and Surveillance
- Microphone Arrays
- Voice Control and Activation

### FEATURES

- Ultra-High 74 dBA SNR
- $-32$  dBV Differential Sensitivity,  $-38$  dBV Single-Ended Sensitivity
- $\pm 2$  dB Sensitivity Tolerance
- $4.72 \times 3.76 \times 3.5 \text{ mm}$  Surface-Mount Package
- Non-Inverted Signal Output
- Extended Frequency Response from 20 Hz to 20 kHz
- Enhanced RF Performance
- 285  $\mu\text{A}$  Current Consumption
- 123 dB SPL Acoustic Overload Point
- $-77$  dBV PSR
- Compatible with Sn/Pb and Pb-Free Solder Processes
- RoHS/WEEE Compliant

## SPECIFICATIONS

**TABLE 1. ELECTRICAL CHARACTERISTICS**

$T_A = 25^\circ\text{C}$ ,  $V_{DD} = 1.5$  to  $3.63$  V, unless otherwise noted. Typical specifications are not guaranteed.

PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS	NOTES
<b>PERFORMANCE</b>						
Directionality			Omni			
Sensitivity	1 kHz, 94 dB SPL, differential	-34	-32	-30	dBV	
	1 kHz, 94 dB SPL, single-ended	-40	-38	-36	dBV	
Signal-to-Noise Ratio (SNR)	20 Hz to 20 kHz, A-weighted, differential		74		dBA	
	20 Hz to 20 kHz, A-weighted, single-ended		74		dBA	
Equivalent Input Noise (EIN)	20 Hz to 20 kHz, A-weighted		20		dBA SPL	
Dynamic Range	Derived from EIN and maximum acoustic input		103		dB	
Frequency Response	Low frequency -3 dB point		20		Hz	
	High frequency -3 dB point		>20		kHz	
Total Harmonic Distortion (THD)	105 dB SPL			0.6	%	
Power-Supply Rejection (PSR)	217 Hz, 100 mVp-p square wave superimposed on $V_{DD} = 1.8$ V, A-weighted		-77		dBV	
Power Supply Rejection Ratio (PSRR)	1 kHz, 100 mV p-p sine wave superimposed on $V_{DD} = 1.8$ V		-45		dB	
Acoustic Overload Point	10% THD		123		dB SPL	
<b>POWER SUPPLY</b>						
Supply Voltage ( $V_{DD}$ )		1.5		3.63	V	
Supply Current ( $I_S$ )						
	$V_{DD} = 1.8$ V		285	350	$\mu\text{A}$	
	$V_{DD} = 3.3$ V			375	$\mu\text{A}$	
<b>OUTPUT CHARACTERISTICS</b>						
Output Impedance	Differential		430		$\Omega$	
	Single-Ended, OUTPUT+		180		$\Omega$	
	Single-Ended, OUTPUT-		250		$\Omega$	
Output DC Offset	OUTPUT+		0.72		V	
	OUTPUT-		0.66		V	
Maximum Output Voltage	Differential, 123 dB SPL input		0.79		V rms	
	Single-Ended, 123 dB SPL input		0.40		V rms	
Noise Floor	20 Hz to 20 kHz, A-weighted, rms		-106		dBV	

## ABSOLUTE MAXIMUM RATINGS

Stress above those listed as Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these conditions is not implied. Exposure to the absolute maximum ratings conditions for extended periods may affect device reliability.

**TABLE 2. ABSOLUTE MAXIMUM RATINGS**

PARAMETER	RATING
Supply Voltage ( $V_{DD}$ )	–0.3 V to +3.63 V
Sound Pressure Level	160 dB
Mechanical Shock	10,000 g
Vibration	Per MIL-STD-883 Method 2007, Test Condition B
Temperature Range	
Biased	–40°C to +85°C
Storage	–55°C to +150°C

## ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## SOLDERING PROFILE

Figure 1. Recommended Soldering Profile Limits

TABLE 3. RECOMMENDED SOLDERING PROFILE\*

PROFILE FEATURE		Sn63/Pb37	Pb-Free
Average Ramp Rate ( $T_L$ to $T_P$ )		1.25°C/sec max	1.25°C/sec max
Preheat	Minimum Temperature ( $T_{\text{SMIN}}$ )	100°C	100°C
	Maximum Temperature ( $T_{\text{SMAX}}$ )	150°C	200°C
	Time ( $T_{\text{SMIN}}$ to $T_{\text{SMAX}}$ ), $t_S$	60 sec to 75 sec	60 sec to 75 sec
Ramp-Up Rate ( $T_{\text{SMAX}}$ to $T_L$ )		1.25°C/sec	1.25°C/sec
Time Maintained Above Liquidous ( $t_L$ )		45 sec to 75 sec	~50 sec
Liquidous Temperature ( $T_L$ )		183°C	217°C
Peak Temperature ( $T_P$ )		215°C +3°C/-3°C	260°C +0°C/-5°C
Time Within +5°C of Actual Peak Temperature ( $t_P$ )		20 sec to 30 sec	20 sec to 30 sec
Ramp-Down Rate		3°C/sec max	3°C/sec max
Time +25°C ( $t_{25^{\circ}\text{C}}$ ) to Peak Temperature		5 min max	5 min max

**\*Note:** The reflow profile in Table 3 is recommended for board manufacturing with InvenSense MEMS microphones. All microphones are also compatible with the J-STD-020 profile

## **THEORY OF OPERATION**

### **BALANCED OUTPUT**

The ICS-40730 has a balanced differential output with 430  $\Omega$  output impedance. This configuration is compatible with a fully-differential codec input and provides the benefits of a balanced signal between the microphone and codec. A balanced analog audio signal provides rejection of common-mode noise that is present on both the positive and negative signals.

### **SINGLE-ENDED OPERATION**

The ICS-40730 can be used as a single-ended microphone by using the signal from only one of the two output pins. In this configuration, the sensitivity will be 6 dB lower than the differential output, but with the same high SNR performance. Pin OUTPUT+ will output the non-inverted signal, relative to the acoustic input, while the OUTPUT- pin will output an inverted signal. The unused output pin should be left disconnected when the mic is used in single-ended mode; do not connect the unused pin to ground.

## APPLICATIONS INFORMATION

### CODEC CONNECTION

The ICS-40730 output can be connected to a dedicated codec microphone input (see Figure 7) or to a high input impedance gain stage. A 0.1  $\mu\text{F}$  ceramic capacitor placed close to the ICS-40730 supply pin is used for testing and is recommended to adequately decouple the microphone from noise on the power supply. DC blocking capacitors are required at the outputs of the microphone. These capacitors create a high-pass filter with a corner frequency at

$$f_c = 1/(2\pi \times C \times R)$$

where  $R$  is the input impedance of the codec.

A minimum value of 2.2  $\mu\text{F}$  is recommended in Figure 7 because the input impedance of some codecs can be as low as 2 k $\Omega$  at their highest PGA gain setting, which results in a high-pass filter corner frequency at 37 Hz.

Figure 7. ICS-40730 Connected to a Differential-Input Codec

## PCB DESIGN AND LAND PATTERN LAYOUT

Lay out the PCB land pattern for the ICS-40730 at a 1:1 ratio to the solder pads on the microphone package (see Figure 8.) Take care to avoid applying solder paste to the sound hole in the PCB. Figure 9 shows a suggested solder paste stencil pattern layout. The response of the ICS-40730 is not affected by the PCB hole size, as long as the hole is not smaller than the sound port of the microphone (1.5 mm, or 0.059 inch, in diameter). A 2 mm (0.080 inch) diameter for the hole is recommended.

Align the hole in the microphone package with the hole in the PCB. The exact degree of the alignment does not affect the performance of the microphone as long as the holes are not partially or completely blocked.

**Figure 8. Suggested PCB Land Pattern Layout**

**Figure 9. Suggested Solder Paste Stencil Pattern Layout**

## PCB MATERIAL AND THICKNESS

The performance of the ICS-40730 is not affected by PCB thickness. The ICS-40730 can be mounted on either a rigid or flexible PCB. A flexible PCB with the microphone can be attached directly to the device housing with an adhesive layer. This mounting method offers a reliable seal around the sound port while providing the shortest acoustic path for good sound quality.

## **HANDLING INSTRUCTIONS**

The ICS-40730 has a large sound hole, allowing for exposure of the diaphragm to the outside world. Care should be taken to prevent any particulate or objects from contaminating or impacting the diaphragm.

### **PICK AND PLACE EQUIPMENT**

The MEMS microphone can be handled using standard pick-and-place and chip shooting equipment. Take care to avoid damage to the MEMS microphone structure as follows:

- Use a standard pickup tool to handle the microphone. Because the microphone hole is on the bottom of the package, the pickup tool can make contact with any part of the lid surface.
- Do not pick up the microphone with a vacuum tool that makes contact with the bottom side of the microphone.
- Do not pull air out of or blow air into the microphone port.
- Do not use excessive force (>1 kg) to place the microphone on the PCB.

### **REFLOW SOLDER**

For best results, the soldering profile must be in accordance with the recommendations of the manufacturer of the solder paste used to attach the MEMS microphone to the PCB. It is recommended that the solder reflow profile not exceed the limit conditions specified in Figure 1 and Table 3.

### **BOARD WASH**

When washing the PCB, ensure that water does not make contact with the microphone port. Do not use blow-off procedures or ultrasonic cleaning.

## OUTLINE DIMENSIONS

NOTE :  
 1. ALL DIMENSION ARE IN MILLIMETER.  
 2. GENERAL TOLERANCE : ±0.10mm UNLESS SPECIFIED
